

GENERAL SAFETY PRECAUTIONS WHILE HANDLING

CHLORINE

For safe handling of chlorine, it is necessary to adhere to the following guidelines:

1. Never apply or expose cylinder to heat for any purposes. Never place them in a bath of hot water or expose them to heat, to increase gas discharge rate.
2. Store cylinders and containers far away from flammable and other materials with which chlorine reacts and in a clean well ventilated fire resistant area.
3. Never mix chlorine with other gas in a shipping container.
4. Never allow any liquid or moisture to enter the chlorine container.
5. Do not manifold cylinders being emptied in the liquid phase.
6. Permit only reliable and trained personal to handle chlorine.
7. Report all leaks and other irregularities to the supplier.
